ISM3232C
Module 9 Project: React Native Core Components

Instructions

For this assignment you will be studying the TextInput Core Component. Customize the TextInput app by changing the name of the constant to match the emoji you choose to replace the pizza slice.

Suggestions: an animal representing your favorite sports team, an animal representing the year you were born in the Chinese calendar, just not your basic keyboard emojis (hearts, thumbs up, hugging face, etc.). Here is an example created with a dolphin:

Hello World!

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once your project is complete, commit your file (screenshot showing your code and the input/output panel with the phrase translated into your 'words' (emojis)) to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project.
